HG natural stone protector

- invisible protection against moisture and dirt

HG natural stone protector invisibly protects marble and other types of calciferous natural stone against penetration of water, stains, dirt and limescale. This product seals off the natural stone, making it ideal for use in bathrooms, on kitchen worktops, window ledges and tables. This product can also be used outdoors, and greatly reduces the risk of discoloration, efflorescence, frost damage, mould and algae.

Attention: please see inside. Transport and store the bottle upright.

contains a.o.:

aliphatic hydrocarbons	> 30%
aromatic hydrocarbons	15-30%

Keep container tightly closed. **P501-** Dispose of contents and container in accordance with all local, regional, national and international regulations.

HG natural stone protector

- invisible protection against moisture and dirt

Directions:

1. The surface must be completely clean and free of grease and dust.
2. Apply the liquid, undiluted and generously, in straight tracks in one direction, using a paint roller or brush. On vertical surfaces, always work from top to bottom and do not treat more than 6-8 m² at one time.
3. After approximately 4 minutes, remove any leftover liquid using a clean, lint-free cloth. Should a film be left behind on the surface, remove it directly using turpentine.
4. For optimum protection of very porous surfaces, apply another one or two extra layers on top of the first layer. Each layer must dry at least 1 hour before a following layer can be applied.
5. Stay away from the treated surface for about 12 hours, and do not expose it to moisture. Maximum protection is achieved after 24 hours.

Coverage: ±5-10 m² per 250 ml.

Maintenance: Treated surfaces can best be cleaned using *HG natural stone bathroom cleaner*.

Attention: This product may deepen the colour of the natural stone. Do not apply at temperatures above 25°C or in direct sunlight. Ventilate well during use. Make sure that all areas not to be treated are covered. Surfaces treated with this product are no longer suitable for treatment with conventional sealers, polish or waxes.
