

HG terra cotta wax natural **(HG product 82)**

HG "terra cotta wax natural" is a protective, easy to apply wax for all types of terra cotta floors. This unique product intensifies the colour of the tile, which enhances the authentic character of the tile floor. It also gives the tile a warm, rustic satin gloss. Is neither sticky nor tacky.

Directions for use:

- 1) The surface must be completely clean and free of grease and dust. For the treatments that may be required: see the HG terra cotta floors treatment matrix on the side of this bottle.
- 2) The glue/cement and grouting of new floors must be completely hardened and dry. The drying time is usually 4 – 6 weeks.
- 3) Existing, porous floors must be well dried after cleaning. However, the underfloor heating must be switched off for at least 12 hours prior to the treatment with this product.
- 4) Treat porous floors beforehand with HG "impregnating protector" (HG product 13).
- 5) Shake well before use and apply the wax thinly at room temperature. Apply evenly over the surface by using a waxer.
- 6) Polish with a clean, lint-free cloth, but it is easier to use an electrical (parquet) polishing machine for this purpose.

Usage:

25 – 40 m² per litre, depending on the type of tile.

Maintenance:

For regular mopping: HG "terra cotta clean & shine" (HG product 86). See also the HG terra cotta floors treatment matrix on the side of this bottle.
