HG detergent additive against unpleasant odours in sports clothing

Unpleasant odours in sports clothing, caused by perspiring whilst playing sports or because the clothing stayed too long in the sports bag, in the laundry basket or stayed wet in the washing machine, will not be removed properly with just the main detergent. These unpleasant odours become noticeable as soon as the washed clothing is ironed or worn. HG "detergent additive against unpleasant odours in sports clothing" is an extremely effective formula that removes odour molecules that have penetrated deep into the fibres. This product is therefore ideal for thoroughly removing any odours from towels that no longer smell fresh despite having been washed.

Directions for use: The inside of the cap is a measuring cup with measuring rings. Shake the measuring cup every so often during filling to distribute the powder evenly, and to ensure you measure the correct amount. Use approximately 30 grams per wash. The content of this packaging is enough for approximately 16 washes. Use the normal amount of your main detergent. Add approximately 30 grams of HG "detergent additive against unpleasant odours in sports clothing" to the main detergent in the main detergent tray. If laundry smells particularly unpleasant, a double dose can be added to the main detergent.

Attention: Transport and store the pot upright. Read the instructions before use. Always comply with the care label in your clothing. Do not mix with bleach. Only use this product on colour-fast fabrics. In case of doubt, check the fabric for colour fastness in an inconspicuous place (e.g. the inside of a hem). Check this by applying a solution of the product (1 teaspoon in 0.5 litres of water) and letting it dry. Do not use on wool or silk. Wear suitable gloves if you have a sensitive skin. • Medical personnel can request the data sheet via +31 (0)36 54 94 777 • The consumer's information sheet can be obtained via www.HG.eu
