universal stain & odour remover with active oxygen

### HG oxi stain wonder

Use HG "oxi stain wonder" as a:

- in-wash stain remover by adding it to the detergent
- pre-wash product
- soaking product
- directly on the stain as a stain remover

HG "oxi stain wonder" with active oxygen is a universal stain remover that removes even the most persistent stains, such as grass, red wine, coffee, tea, sauces and food remnants. The active oxygen also removes unpleasant odours that have penetrated deep into the fibres. HG "oxi stain wonder" can be used in different ways for both white and colour\* washable fabrics. Read the instructions carefully before use!

**Directions for use:** The inside of the cap is a measuring cup with measuring rings. Shake the measuring cup every so often during filling to distribute the powder evenly, and to ensure you measure the correct amount.

**Washing machine: as in-wash stain remover.** Measure your detergent as usual. Fill the measuring cup with 25 ml of HG "oxi stain wonder" and add this amount to your detergent in the detergent drawer.

**Washing machine: as a pre-wash.** Fill the measuring cup with 25 ml of HG "oxi stain wonder". Pour this amount in the pre-wash compartment, and add your main detergent to the detergent drawer.

**As a soaking product:** Fill the measuring cup with 25 ml of HG "oxi stain wonder". Mix this in 5 litres of warm water. Leave the laundry to soak for one hour. White clothing can be soaked longer, with a maximum of 5 hours. Use double the above dose for persistent stains. After soaking, rinse the clothing thoroughly with clean water.

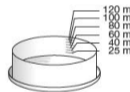

**Directly on the stain as a stain remover:** Dissolve 1 teaspoon HG "oxi stain wonder" in 0.5 litres of warm water and apply this to the stain. Then rinse in the washing machine with your normal detergent or rinse thoroughly with clean water.

**Synthetic carpet or rugs: (do not use on wool).** Take up surplus dirt with a clean white absorbing cloth. Mix 1 teaspoon HG "oxi stain wonder" with 0.5 litres of warm water and apply it to the stain. Leave it to work for 5-30 minutes and then pat dry. After the stain has been removed, dab the area with clean water. Then leave the carpet to dry and vacuum once dry.

**Attention: Transport and store the jar upright.** Read the instructions carefully before use. Always follow the instructions on the care label of your clothing. Only use this product on colourfast fabrics. If you are in doubt, test the colourfastness in an inconspicuous place, for example the inside of a hem. Check this by applying a solution of the product, 1 teaspoon in 0.5 litres of warm water, and leave it to dry. If you use the product directly on the stain, never use more than 1 teaspoon in 0.5 litres of water. Do not store the solution after use, but pour it away, the oxygen will continue to release. Do not mix with bleach. Do not apply directly onto metal surfaces, such as buttons or zips, and do not use on rust marks. Do not soak clothing with metal zips, buttons, etc. Do not use on wool or silk. Wear gloves if you have a sensitive skin.
