toilet renovation kit

removes even the most stubborn stains

500 ml e

HG toilet renovation kit

- removes even the most stubborn stains
- gives your toilet pan a new lease of life
- extremely powerful

The glaze on a toilet pan becomes more porous as it gets older. Deposits such as limescale or uric scale stick to it more easily and mix with other dirt. These generally persistent deposits are not only found in the visible parts of the toilet, (such as the neck, for example), but also hidden under the rim.

The deposits under the rim of the toilet pan prevent the toilet from ever being truly hygienically clean and leaves a persistently musty smell in the toilet. Deposits under the rim reduce the flushing action of the toilet.

The *HG toilet renovation kit* can be used to remove these deposits effectively. The content of this *HG toilet renovation kit* consists of the following products:

- 1 bottle of *HG toilet renovation cleaner*, a super powerful cleaner, developed especially to remove even the most persistent deposits from the toilet pan
- 1 absolutely non-scratch, but extremely effective, *HG scrubbing pad* to remove even the most persistent deposits
- 1 convenient *HG scrubber*, for easy scrubbing of the inside of the pan and for scrubbing under the rim and in the neck
- 2 plastic gloves

The specially developed formula of *HG toilet renovation cleaner* adheres to the surface of the pan and, in combination with the handy scrubber and the absolutely non-scratch, but extremely effective, scrubbing pad, it ensures removal of the most persistent deposits. After use, the toilet pan is truly hygienically clean and fresh smelling again, giving it a new lease of life. **Transport and store the box upright.** This product is not suitable for septic tanks.
